

Fishing port Kupang Indonesia

At 3 locations in the Indonesian archipelago small scale fishing harbours are planned to improve the facilities for the local fishermen.

At each location berthing facilities are planned for access by local fishing craft and by freezers for exporting the fish. Onshore facilities are designed for fish processing, freezing and storage of fresh fish.

Extent of services:

- Preliminary marine surveys at each site
- Hydraulic study (wave climate, wave propagation and sediment transport) by mathematical modelling
- Preliminary design of marine works at each site

Client
Government of Indonesia, Asian
Development Bank

Location
Kupang
Indonesia
