

Forcados South Point Erosion Study

The last decades ongoing erosion has taken place at the coastline of the SPDC (Shell) terminal at Forcados, Nigeria. Several parts of the coastline have been protected in course of time.

SPDC now intends to issue an overall study on the problem in order to achieve long term stability of the whole area.

Svašek Hydraulics has executed for this study a site inspection, an analysis of existing studies and data and prepared the technical specifications of marine surveys and studies on the erosion problem.

Client

Shell International Oil Products
(S.I.O.P.) B.V., the Netherlands

Location

Forcados South Point, Nigeria

Date

1996 (specifications)

Services

Site inspection, technical
specifications of marine surveys
and studies on erosion problem
